## SECTION 11: Toxicological information

### 11.1. Information on hazard classes as defined in Regulation (EC) No 1272/2008

Acute toxicity (oral)	: Ingestion of ethylene glycol may result in nausea, vomiting, abdominal cramps, blindness, liver injuries, irritation, reproductive disorders, nerve injuries, convulsions, pulmonary oedema, cardiopulmonary disorders (metabolic acidosis), pneumonia and renal insufficiency which may result in death. A single dose of about 100 ml is fatal to humans. Inhalation of high concentrations of vapors or mists over a long period of time also has toxic effects.
Acute toxicity (dermal)	: May cause an allergic skin reaction.
Acute toxicity (inhalation)	: At high concentrations, vapours/mist may irritate throat and respiratory system and cause coughing.
Additional information	: Occupational exposure to the substance or mixture may cause adverse effects. The mixture contains a small amount of Bitrex, which is a bittering agent and is a general description of chemical additives that are added to dangerous products to give it a bitter taste, which creates a strong aversion and as such prevents accidental poisonings for young people in particular children and pets. There are a number of possible chemicals that can be used, but the best known is the Denatonium benzoate (CAS 3734-33-6).
